Professional Summary

Full Stack Developer with 3+ years of professional experience at Automac Technologies, specializing in building scalable web and mobile applications. Strong expertise in React.js, React Native, Node.js, Express.js, and MongoDB with hands-on experience in real-time systems using WebSocket and MQTT. Experienced in developing enterprise-grade solutions across healthcare, hospitality, and IoT domains. Skilled in cloud deployment using AWS (Amplify & EC2) and delivering secure, high-performance applications from development to production. Passionate about clean architecture, optimized performance, and solving real-world business challenges.

Technical Skills

- **Frontend:** React.js, React native, JavaScript, HTML5, CSS3, Mantine UI
- **Backend:** Node.js, Express.js
- **Database:** MongoDB
- **APIs & Tools:** REST APIs, Axios, Zango APIs, WebSocket
- **Other:** Git, VS Code, AWS (Amplify, EC2 server)

PROFESSIONAL EXPERIENCE - Full Stack Developer
Automac Technologies | Telangana, India- Jan 2023 – Present

- Developed and maintained scalable full-stack web and mobile applications using React.js, React Native, Node.js, Express.js, and MongoDB.
- Designed and implemented RESTful APIs and integrated real-time communication using WebSocket and MQTT.
- Built secure authentication systems with session management and role-based access control.
- Deployed and managed production applications using AWS Amplify and EC2.
- Collaborated with IoT hardware teams to integrate real-time sensor data into web and mobile applications.
- Delivered end-to-end software solutions across hospitality, healthcare, and IoT domains.

Projects

1. Hotel Management System – Full Stack Developer

- Designed and developed a comprehensive Hotel Management System aligned with real-world hotel operations, featuring separate modules for Admin and Front Desk users.
- Built the application end-to-end, including frontend development, backend architecture, database design, API integration, and cloud deployment.

- Implemented secure authentication with session management and role-based access control (RBAC) to ensure controlled feature access based on user roles.
- Developed streamlined booking and room management workflows, supporting hotel-wise room filtering and dynamic room status management (Vacant, Occupied, Housekeeping, Maintenance).
- Enabled front desk operations such as booking creation, guest information management, stay extensions, and real-time dashboard monitoring for room availability, check-ins, expected checkouts, and daily revenue.
- Created a centralized admin dashboard to manage rooms, bookings, housekeeping, maintenance tracking, invoicing, and revenue analytics within a unified system.
- Tech Stack: React.js, Mantine UI, Node.js, Express.js, MongoDB, Axios, AWS Amplify.

2. Endoscopy Patient Report & Imaging System – Frontend Developer

- Developed a medical-grade Endoscopy Imaging and Patient Report Management System for hospitals and diagnostic centers as part of a commercial portable Raspberry Pi–based endoscopy solution.
- Designed and implemented the complete frontend using React.js and Mantine UI, optimized for touch-screen and embedded medical displays.
- Integrated real-time endoscopy camera streaming through Zango APIs, enabling live visualization during medical procedures.
- Built advanced media management features allowing image and video capture, secure local storage, cropping, and preview functionalities for clinical analysis.
- Developed patient registration and structured record management modules to maintain diagnostic history linked with captured media.
- Implemented dynamic PDF report generation with customizable hospital, doctor, and patient details, including selected diagnostic images, along with in-application preview and print functionality to streamline documentation and improve clinical workflow.
- Tech Stack: React.js, Mantine UI, REST APIs, Zango APIs.

3. Meghdooth Kiosk (Mythri Project –Water from Air)– UI/Frontend Developer

- Developed a public kiosk interface to monitor water generation from atmospheric humidity as part of the Mythri "Water from Air" initiative.
- Designed real-time dashboard components to display environmental and operational metrics, including water level (High/Medium/Low), temperature, humidity, dew point, and pump status.
- Integrated WebSocket and REST APIs to enable live sensor data streaming and continuous system monitoring.
- Implemented automated alert notifications for air and water filter maintenance, enhancing system reliability and minimizing downtime.
- Optimized the user interface for high visibility, responsiveness, and smooth interaction in public kiosk environments.
- Tech Stack: React.js, WebSocket, REST APIs.

4. Women Safety Alert Management System – Mobile Application Developer

- Developed a React Native–based mobile application to monitor and control IoT-enabled women safety devices in real time.
- Integrated MQTT protocol for instant communication between the mobile application and connected hardware devices, ensuring reliable alert transmission.
- Implemented secure user authentication features, including registration, login, device pairing, and account management.
- Designed an interactive emergency dashboard to trigger alerts and display real-time device status updates.
- Conducted application testing and deployment using Expo Go, ensuring seamless integration between IoT hardware and the mobile interface.
- Tech Stack: React Native, MQTT, REST APIs, Expo.

Education

- **Bachelor of Science (BSc) | Noble college | Machilipatnam Andhra Pradesh**
  MECs 2022
- **Intermediate |-Aditya Junior College | Bhimavaram, Andhra Pradesh**
  MPC 2019
- **Z.P.H.S | Kalavapudi, Andhra Pradesh**
  2019 SSC 2017

Languages Known

- **English –** Professional working proficiency.
- **Telugu –** Native proficiency
